

Ideation Phase

Empathize & Discover

Date	18 october 2023
Team ID	Team-592597
Project Name	Detecting Covid-19 From Chest X-Rays Using Deep Learning Techniques
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

deep learning approach for predicting the covid19 virus :

Deep learning has been used to develop a number of different approaches for detecting the COVID-19 virus. These approaches typically involve training a deep learning model on a large dataset of images or other data from patients with and without COVID-19. Once the model is trained, it can be used to identify new cases of COVID-19 from new data

Example :
